This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We study for the first time in literature the problem of packet interleaving at IP layer
- We adopt a comprehensive approach made of analytical, simulative, emulative and real network experimentations
- We have implemented and publicly released to the community an Open Source packet interleaver written in C
- Our packet interleaver can effectively decorrelate losses at the IP layer in real networks
- It highly increases real application performance: for example, video distortion can be reduced 65%
