This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

- We introduce a two-step customization process for developing a customized process model from a reference process model.
- A set of patterns is identified that can be used to detect inconsistencies in a customized process model with respect to both feature models and reference process models.
- We propose a formal framework that enables the validation of customizations of reference process models.
