Deep neural models for extracting entities and relationships in the new RDD corpus relating disabilities and rare diseases

Hermenegildo Fabregat, Lourdes Araujo, Juan Martinez-Romo

PII: S0169-2607(18)30133-0  
DOI: [10.1016/j.cmpb.2018.07.007](https://doi.org/10.1016/j.cmpb.2018.07.007)  
Reference: COMM 4753

To appear in: *Computer Methods and Programs in Biomedicine*

Received date: 30 January 2018  
Revised date: 20 June 2018  
Accepted date: 16 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- New data collection (publicly available) manually annotated with disabilities.
- Collections of positive and negative relations between rare diseases and disabilities included.
- Negation and speculation affecting disabilities are also annotated.
- Deep learning models to deal with annotation of disabilities and relation extraction.
- Significant results for both models.
