This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

---

**Highlights**

- We developed a cloud-based energy expenditure system and implemented a web service which estimates the energy expenditure.
- We conducted our trials on 10 individuals' data
- We demonstrated that our model based on Boosted Decision Tree Regression algorithm and the median aggregation technique provides the best performance in terms of RMSE and MAE parameters.
