This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- The first computerized breast cancer risk analysis system using ipsilateral view mammograms.
- Used similarity test to control the feature redundancy.
- Developed new and effective concurrent features incorporated the ipsilateral view features.
- The results are significantly higher than using single view mammogram.
