This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An integer programming formulation and a branch and bound approach are proposed for the hypervolume subset selection problem
- Three bounding procedures are discussed for the branch and bound approach
- An extensive experimental analysis is conducted on a wide range of instances for three and four dimensions.
