This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Asset localization over resource constrained wireless sensor network (WSN).
- WSN management to assign heterogeneous sensors to localize assets with minimized error.
- Localization problem extension considering an overall WSN energy budget restriction.
- Heuristic solution approach using evolutionary learning and meta-heuristic improvements.
