This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We put forward a novel cost-oriented line balancing problem
- Several properties and special cases of the problem are studied
- We design a memetic algorithm that hybridises these properties with a genetic algorithm
- Computational experiments highlight the contributions of each component to the quality of the proposed method
