This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A simple example appeared demonstrating the comparison of linear relaxations of proposed models.
- The example motivates the following important result: the equivalence of two problem formulations from the linear relaxation point of view.
- As noted by some reviewers, the proof of main result contained some imprecision that has been fixed in this version of the paper.
- The process of filtering out redundand constraints was analyzed from computational point of view: reported CPU times to obtain it for several problem instances.
- The paper was improved in various other places in terms of language and precision.
