This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We study the robust dissemination problem, which consists in optimizing data transfers in a deterministic intermittently-connected network where communications may fail.
- We propose a constraint programming formulation to solve the problem.
- We propose a branching algorithm and different filtering algorithms to solve the problem efficiently.
- We provide experimental results showing the efficiency of our methods.
