A New Two-Stage Heuristic for the Recreational Vehicle Scheduling Problem

Sarang Kulkarni, Rahul Patil, Mohan Krishnamoorthy, Andreas Ernst, Abhiram Ranade

PII: S0305-0548(17)30280-0
DOI: [10.1016/j.cor.2017.11.004](https://doi.org/10.1016/j.cor.2017.11.004)
Reference: CAOR 4352

To appear in: *Computers and Operations Research*

Received date: 11 October 2016
Revised date: 31 October 2017
Accepted date: 6 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new mathematical formulation is proposed for solving the recreational vehicle scheduling problem.
- A two-stage heuristic is proposed to reduce the solution time further.
- The performance is evaluated using the large-sized real-life instances.
- The new formulation outperforms existing formulations in the literature.
- The two-stage heuristic outperforms the existing heuristic in the literature.
