This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Mission abort for heterogeneous systems is considered based on updated information
- A random shock model is used to represent the random environment.
- Mission success probability and system survivability are suggested.
- Tradeoff between mission success probability and system survivability is demonstrated.
- Optimal mission abort policy is analyzed based on the model.
