This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We study the relationship between product quality improvement and remanufacturing.
- We find that quality-induced manufacturing cost is the key driver of the results.
- Remanufacturing may stifle or stimulate quality improvement of new products.
- Environmentally neither result is exclusively beneficial or detrimental.
