This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Emergency department beds and physicians are both limited-capacity resources
- Treatment is modelled as an iterative process with multiple physician visits
- Long infrequent boarding is more detrimental than short frequent boarding
- Reducing boarding time when busy is more effective than using fixed buffer capacity
