This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Two-machine flow shop and open shop with a maintenance start window are studied
- For each model, a $3/2 V$ approximation algorithm is developed
- Computational experiments with the flow shop algorithm demonstrate its accuracy
- A detailed review of relevant scheduling models with maintenance is presented
