This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- We propose an integrated inventory routing and freight consolidation model.
- We identify when optimizing single-echelons sequentially is asymptotically optimal.
- We propose a solution framework with a decomposition procedure and local search scheme.
- Experiments demonstrate our framework is effective compared to a sequential approach.
