This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- We develop a synthetic tourism effectiveness index.
- This index is based on the transitive Fre-Primont Total Factor Productivity index.
- We test for the similarity of the general and a special version of this Färe-Primont index.
- It assesses both the general as well as the private and public sector effectiveness.
- The empirical application is on a sample of European regions in the years 2003, 2007 and 2011.
