This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel efficiency effects stochastic frontier model is proposed.
- Standard normal distribution function of exogenous variables is employed to capture technical efficiency.
- The proposed frontier specification contains only the two-sided random noise term
- Philippines rice data is used to demonstrate usefulness of the proposed model.
