This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- The safety-first and expected utility objective captures human decision.
- We explicitly solve for the corresponding optimal dynamic strategy.
- The strategy replicates a portfolio of cash, call, put and digital options.
- The put's open interest is sensitive to investors' perception of crash risk.
- Empirically examining crash indicators supports the theoretical results.
