Maximising the weighted number of activity execution modes in project planning

Jeroen Burgelman, Mario Vanhoucke

PII: S0377-2217(18)30338-2
DOI: [10.1016/j.ejor.2018.04.035](https://doi.org/10.1016/j.ejor.2018.04.035)
Reference: EOR 15097

To appear in: *European Journal of Operational Research*

Received date: 10 February 2016
Revised date: 17 April 2018
Accepted date: 17 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new project scheduling problem is presented
- Multiple discrete time model formulations are presented
- The scheduling flexibility and the effect of inefficient modes is discussed
- Detailed computational experiments to analyse the solution quality are presented
