This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The optimal design of two-part tariffs is investigated in a dynamic supply chain.
- Two vertically related firms invest to increase product quality.
- A two-part tariff may replicate the performance of the integrated monopolist.
- The fixed fee must be linear in quality or in the upstream firm's effort.
