Roldán, Two novel methodologies for considering aggregation functions by implicit equations and minimization problems, *European Journal of Operational Research* (2018), doi: [10.1016/j.ejor.2018.04.023](https://doi.org/10.1016/j.ejor.2018.04.023)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We provide a method to build aggregation functions in an implicit way
- We provide a method to build aggregation function by minimization of appropriate distances
- We relate the second method to penalty-based aggregation functions
- We provide an illustrative example in a decision making problem
