Large Multiple Neighborhood Search for the Clustered
Vehicle-Routing Problem

Timo Hintsch, Stefan Irnich

PII: S0377-2217(18)30206-6
DOI: [10.1016/j.ejor.2018.02.056](https://doi.org/10.1016/j.ejor.2018.02.056)
Reference: EOR 15016

To appear in: *European Journal of Operational Research*

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Large neighborhood search-based approach for the clustered vehicle-routing problem.
- Multiple destroy and repair operators combined with variable-neighborhood descent.
- Generalized Balas-Simonetti neighborhood is essential for performance.
- Computational results compare favorably to state-of-the-art approaches.
