This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We analyze how to consolidate two-classes of shipments and ration dispatch capacity
- We minimize shipment & holding costs using a continuous-time Markov decision process
- The optimal policies are of control limit type under particular conditions
- Using these structural properties, we propose an alternative solution approach
- The proposed approach leads to improvements in two real-life cases
