This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A machine learning, tree-based method for hierarchical data is proposed.
- A comparison across educational systems of nine world countries is performed.
- Flexibility is the new, important aspect of the presented statistical model.
- It is worthwhile to allow for interactions among variables involved in the model.
