This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Single objective: To maximize the minimum of the residual energy in a capacitated network
- Bi-objective: To minimize the transmission time and maximize the minimum of the residual energy
- Polynomial time algorithms for both problems
- Only shortest path problems are solved
- Experiments display the valuable contribution of the algorithm
