This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A constant approximation algorithm for the resource cost aware scheduling problem.
- The algorithm handles general job-dependent resource cost functions.
- Considers arbitrary precedence constraints and release dates.
- The concept of  $\alpha$ -speeds is introduced, which extend  $\alpha$ -point techniques.
- Experimental results on benchmark instances show small approximation ratios.
