This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- A differential oligopoly game is proposed for production planning and water savings.
- The decisions are affected simultaneously by the product and water right prices.
- The optimal decisions are strongly influenced by the three aspects.
- They are water use efficiency, initial water right allocations and water right prices.
