This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We extend one of the two main portfolio insurance methods.
- We deal with the Constant Proportion Portfolio Insurance method.
- We allow the floor to vary over time while controlling the risk of such portfolio management.
- A quantile approach is introduced together with expected shortfall criteria.
- We provide explicit lower bounds on the floor as function of past asset returns and volatilities.
- We show how this new asset allocation method performs for various financial market conditions.
