Conditional inspection and maintenance of a system with two interacting components

M.D. Berrade, P.A. Scarf, C.A.V Cavalcante

PII: S0377-2217(18)30078-X  
DOI: [10.1016/j.ejor.2018.01.042](https://doi.org/10.1016/j.ejor.2018.01.042)  
Reference: EOR 14943

To appear in: *European Journal of Operational Research*

Received date: 26 April 2017  
Revised date: 18 January 2018  
Accepted date: 24 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Analysis of a system when failure of component 1 may induce a defect in component 2
- A maintenance policy based on the delay-time model
- Inspection of component 2 is expensive relative to that of component 1
- Failure of component 1 is interpreted as indication of defect in component 2
- Component 1 inspection prevents component 2 failure especially for short delay time
