This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We describe a new practical health care logistics problem.
- Facility location and rich vehicle routing decisions are made simultaneously.
- We model the problem and propose a fast and effective hybrid heuristic.
- Computational results offer insights on the methods and for the industrial partner.
