This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We find closed-form expressions for the moments of the net present value of a project.
- We use an accurate approximation of the net present value distribution of a project.
- We show that the net present value of a cash flow tends to a lognormal distribution.
- We show that the net present value of a project tends to a normal distribution.
- We find the optimal sequence of stages that maximizes the expected net present value.
