This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The new state dependent transformed Beta degradation process is proposed
- Its stochastic equivalence to a Gamma process with random scale parameter is shown
- It is shown that the equivalence ends up after performing imperfect maintenance
- Model selection issues and consequences of a model misidentification are discussed
- A numerical example is developed to quantify estimation and prediction errors
