This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Decision making models for freight transport by urban/suburban rail
- Goods are transported from departure stations to arrival stations
- Approximation and dynamic programming algorithms for two station cases
- Multiple station problem modeled as an interval graph
- Mixed integer linear models and an epsilon-constraint model for the general case
