This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- We study mechanism for supply chain to reduce pollution via collaborative investments
- We address supply chain profit allotment complying with sustainable constraints
- We focus on balancing between economic and environmental and social sustainability
- We explore impact of public health as sustainable constraint on emissions reduction

• Government subsidy shared between supply chain firms is negotiated via transfer price
