Co-residence Based Data Vulnerability vs. Security in Cloud Computing System with Random Server Assignment

Gregory Levitin , Liudong Xing , Yuanshun Dai

PII: S0377-2217(17)31075-5  
DOI: [10.1016/j.ejor.2017.11.064](https://doi.org/10.1016/j.ejor.2017.11.064)  
Reference: EOR 14852

To appear in: *European Journal of Operational Research*

Received date: 15 June 2017  
Revised date: 26 November 2017  
Accepted date: 28 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Co-residence attacks in cloud systems are considered.
- The probabilities of data theft and data corruption are obtained.
- Three-objective data partition/replication optimization problem is formulated.
- Uncertainty about the number of attacker's virtual machines is taken into account.
