Heuristics for a flowshop scheduling problem with stepwise job objective function

Luciana S. Pessoa, Carlos E. Andrade

PII: S0377-2217(17)30958-X
DOI: [10.1016/j.ejor.2017.10.045](https://doi.org/10.1016/j.ejor.2017.10.045)
Reference: EOR 14769

To appear in: *European Journal of Operational Research*

Received date: 2 January 2017
Revised date: 19 October 2017
Accepted date: 21 October 2017

Please cite this article as: Luciana S. Pessoa, Carlos E. Andrade, Heuristics for a flowshop scheduling problem with stepwise job objective function, *European Journal of Operational Research* (2017), doi: [10.1016/j.ejor.2017.10.045](https://doi.org/10.1016/j.ejor.2017.10.045)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new flowshop problem with an objective function based on stepwise jobs payoffs is introduced
 - A mathematical formulation and a benchmark of instances are provided
 - A new efficient greedy constructive heuristic is proposed for flowshop problems
 - Primal and dual bounds are established
-
