This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- In a pooling setting dedicated inventories do not ensure credible information sharing
- A trade-off exists between central coordination and local demand information
- An inventory transfer pricing mechanism that restores demand truth-telling may exist
- When inventory is managed locally, information asymmetry does not add inefficiency
