This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- We configure a supply chain with guaranteed service time and emission constraints.
- The problem is decomposed into two subproblems based on its structural properties.
- The subproblem of determining the service time is solved optimally.
- A hybrid algorithm is developed to solve the problem efficiently and effectively.
