This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Collaborative replenishment situations with multiple sources of supply are modelled
- Conditions for concavity of associated cooperative games are introduced
- Concavity cannot be guaranteed in general even with submodular cost functions
- In the associated two-stage game the Shapley value induces complete participation
