Integer programming formulations for three sequential discrete competitive location problems with foresight

Jose Gentile, Artur Alves Pessoa, Michael Poss,
Marcos Costa Roboredo

PII: S0377-2217(17)30772-5
DOI: [10.1016/j.ejor.2017.08.041](https://doi.org/10.1016/j.ejor.2017.08.041)
Reference: EOR 14660

To appear in: *European Journal of Operational Research*

Received date: 27 January 2017
Revised date: 11 July 2017
Accepted date: 21 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Exact algorithms are proposed for three competitive location problems.
- Several numerical experiments are presented assessing the algorithms efficiency.
- The results are compared with the methods found in the literature.
