Heuristics for the Stochastic Dynamic Task-Resource Allocation Problem with Retry Opportunities

Nalan Gülpınar, Ethem Çanakoğlu, Juergen Branke

PII: S0377-2217(17)30796-8
DOI: [10.1016/j.ejor.2017.09.006](https://doi.org/10.1016/j.ejor.2017.09.006)
Reference: EOR 14684

To appear in: *European Journal of Operational Research*

Received date: 1 June 2016
Revised date: 19 August 2017
Accepted date: 3 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A stochastic multi-period task-resource allocation problem is studied.
- A constructive heuristic is introduced.
- Forward dynamic programming and evolutionary algorithms are proposed.
- Computational performances of algorithms are illustrated.
