This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Robust recoverable and two-stage selection problems are considered.
- Cost uncertainty is modelled using continuous and discrete budgeted uncertainty sets.
- For continuous uncertainty, we proof polynomial solvability of our problems.
- Efficient combinatorial algorithms for subproblems are discussed.
- For discrete uncertainty, compact mixed-integer programming formulations are derived.
