This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- Four multicriteria methods for equity portfolio selection are compared.
- All these methods can successfully be applied to value-momentum portfolio selection.
- Combining value and momentum criteria into composite measures can benefit investors.
- Investors can choose the method that best fits their portfolio-selection purposes.
- The overall results are surprisingly robust to the firm size effect.
