

## Accepted Manuscript

Branch-and-cut for the forest harvest scheduling subject to clearcut and core area constraints

Miguel Constantino, Isabel Martins

PII: S0377-2217(17)30703-8  
DOI: [10.1016/j.ejor.2017.07.060](https://doi.org/10.1016/j.ejor.2017.07.060)  
Reference: EOR 14610

To appear in: *European Journal of Operational Research*

Received date: 23 February 2016  
Revised date: 24 May 2017  
Accepted date: 26 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- A new model in integer programming for the forest harvest scheduling is proposed.
- The model mitigates forest fragmentation caused by harvestings.
- A branch-and-cut is proposed to solve the model.
- The results proved to be very satisfactory from a practical point of view.
