The “weak-link” approach to network DEA for two-stage processes

Dimitris K. Despotis , Gregory Koronakos , Dimitris Sotiros

PII: S0377-2217(16)30156-4
DOI: [10.1016/j.ejor.2016.03.028](https://doi.org/10.1016/j.ejor.2016.03.028)
Reference: EOR 13590

To appear in: *European Journal of Operational Research*

Received date: 15 October 2015
Revised date: 18 February 2016
Accepted date: 15 March 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We deal with two stage series processes of varying complexity
- We give a new definition of the system efficiency inspired by the *weak link* in supply chains
- The modeling framework is multi-objective and max-min programming
- Our approach secures the uniqueness of the efficiency scores
