This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- We consider a mass-casualty incident with an arbitrary number of patient classes.
- We develop a simple, effective index policy to prioritize patients.
- The proposed policy is ideal for providing decision support to on-scene responders.
- Our heuristics perform almost as well as complicated optimization models.
