Progressive Hedging Applied as a Metaheuristic to Schedule
Production in Open-pit Mines Accounting for Reserve Uncertainty

Amina Lamghari, Roussos Dimitrakopoulos

PII: S0377-2217(16)30135-7
DOI: [10.1016/j.ejor.2016.03.007](https://doi.org/10.1016/j.ejor.2016.03.007)
Reference: EOR 13569

To appear in: *European Journal of Operational Research*

Received date: 19 May 2014
Revised date: 22 December 2015
Accepted date: 5 March 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A stochastic version of the mine production scheduling problem is considered
- A two-phase solution approach is developed
- It is based on the progressive hedging strategy and a fix-and-optimize heuristic
- Numerical results indicating the efficiency of the proposed approach are provided
