This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Presents a continuous time, multiple-product short sea inventory-routing problem.
- A hybrid matheuristic is developed.
- A regular maritime routing and scheduling problem is solved as a subproblem.
- Extensive testing shows that the matheuristic is efficient and effective.
