This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 **Highlights**

- 2 • We consider a single-machine scheduling problem with an outsourcing op-
3 tion.
- 4 • Processing times are uncertain and expressed as the set of scenarios.
- 5 • The objective is to minimize the maximum regret over all scenarios.
- 6 • We establish the computational complexity such as NP-hardness and FP-
7 TAS.
- 8 • We investigate several conditions under which the problem can be poly-
9 nomial.
